

PRESS RELEASE

heartbase certified – Afib Ablation Registry™ Version 1.0

Chicago – August 3, 2016

On August 3, 2016, heartbase, Inc. received certification for Version 1.0 of the Afib Ablation Registry™ by the American College of Cardiology Foundation. Effective immediately, heartbase will be able to provide health care institutions with an efficient means of collecting and reporting Afib ablation-related data.

“After rigorous testing of your commercial software, we have determined that ‘heartbase’ meets NCDR® certification requirements for version 1 of the Afib Ablation Registry™,” wrote Barbara J. Christensen, Senior Director of NCDR Registry Services. “The American College of Cardiology Foundation (ACCF) awards certification in accordance with the terms and conditions of the agreement between ACCF and heartbase, Inc., effective June 4, 2015.”

From the NCDR website:

“The Afib Ablation Registry™ assesses the prevalence, demographics, acute management and outcomes of patients undergoing atrial fibrillation (Afib) catheter ablation procedures. Its data will support the development of evidence-based guidelines for Afib treatments that will improve outcomes for patients.”

About heartbase, Inc.

The hbCOR solution gives clients full control of valuable hospital-owned clinical data (ACC-NCDR, STS, CMS, GWTG, The Joint Commission, VQI, & more) to bring performance in line with national standards, generate dictationless procedure notes, comply with registry requirements, and identify and apply emerging best practices.

Introduced in 1992, heartbase® continues to be at the forefront of data management and analytics. Installed nationwide in more than 180 prestigious institutions, heartbase® actively collaborates with clients and members of the healthcare community to deliver a state of the art CVIS solution.
