heartbase is Certified in CathPCI v5.0

We are very pleased to announce that heartbase is now officially certified by the ACC-NCDR to accept data for the CathPCI v5 Registry. The first major update to CathPCI since 2009, v5 represents a paradigm shift in the form's functionality, particularly in the way technology downloads are incorporated.

For the past year, heartbase has worked tirelessly to streamline our development process for new and updated registries, and that work has benefited our clients. We were among the very first to certify for the massive STS Adult Cardiac v2.9 registry, and are uniquely prepared for early certification for STS General Thoracic and ACC-NCDR ACTION updates later this year.

In CathPCI v5, many sections have undergone significant changes, including: History & Risk Factors (such as Tobacco Use), Pre-procedure Assessment, Native & Graft Assessment, and Intra & Post Procedure Events. We have also included the Optional sections for participants who wish to collect data for long term care, including fields from the Seattle Angina Questionnaire, the Rose Dyspnea Scale, & Follow-up. In total, the new version has modified or added nearly 600 fields.

At the time of this press release, heartbase is one of only two vendors certified. We are actively working with the ACC-NCDR to ensure future registry certifications are done in a more prompt and efficient manner to allow for more timely preparation for our clients.

To prepare our customers for the changes, we will be hosting several webinars and training sessions in the coming month. Our first webinar will be on March 27th, led by heartbase's Director of Training Carmen Ernst, BSN, RN. Please click [here](#) to register.

About heartbase, Inc.

Since 1992, heartbase has provided healthcare centers with the most technologically innovative and clinically intuitive data management and registry reporting solution in the industry. Working collegially with its immense network of users, heartbase has developed an extensive library of reporting tools that provides clients with complete control of their hospital-owned clinical data. Heartbase's revolutionary hbCOR platform propels clinical performance, aligns clinical data with registry requirements, and unites health care systems from across our network with access to the most comprehensive reporting repository in the industry.
